INDUSTRIAL AUTOMATION  
AND PROCESS CONTROL

*Control, is in your hands!*

## About Us

DYCO is a professional services Company specialized in the industrial automation and process control field which is founded on the solid bases that can only be provided by the large professional trajectory of its founding partners in countries such as:

- ◆ Argentina.
- ◆ Saudi Arabia.
- ◆ United Arab Emirates.
- ◆ Jordan.
- ◆ Mexico.

Our goal is to offer a quality service pertaining to your productive processes optimization.

How are we going to achieve it? By...

- ✓ Analyzing in detail your productive process.
- ✓ Effectively diagnosing your needs.
- ✓ Offering solutions adjusted to your capabilities.
- ✓ Developing and applying the most proper solution.

## What can we offer you?

More than trying to be just an industrial automation and process control services provider, we want to go beyond and become your ally. To work by your side in the continuous improvement of your processes is our mission.

*«An automated process is an efficient process; If it's well done!»*

## Our Services

**To guarantee the operational continuity of your plant**

In DYCO we understand how important is to keep your production line active. To do so, we look for the best solution available in the market to substitute or to replace equipment belonging to your current systems, enlarging its lifetime in the process.

**DYCO improves your production processes**

For your industrial automation and process control project we can offer you turnkey solutions or we can also participate in a specific phase of your project such as, engineering development, electrical panels, control systems programming, and starting-up your automated process; with the quality and efficiency that you deserve.

For the development of your projects DYCO offers you the following services:

- ◆ Delivery of high detailed engineering documentation.
- ◆ We take in-charge of building and testing of your electrical panels and plan your timely shipment and installation at site.
- ◆ Process optimization due to an efficient control system programming and configuration of the instrumentation and equipment involved.
- ◆ Starting up your automated processes.
- ◆ After-sales technical support.
